

Clickup UX Report

Introduction

Clickup is a website that serves to provide access to different courses undertaken by students and is mainly used as an auxiliary for existing institutions. Clickup is being evaluated as it is the main website used by students to access their course content. The focus is on the user experience while making use of the website.

Website Overview

Clickup is mainly used to view and access course material from existing institutions. There are two sides to clickup, the user and the organiser. Users use the website to access course materials while organisers make use of the website to create different courses and keep in constant communication with users and make real time updates.

UX Study Method

There were 4 participants in this study. A shortened UEQ questionnaire was completed by all participants after they made use of Clickup as a user. Participants were required to access a course and interact with each of the different features provided by Clickup.

UEQ Results

obstructive	o o o o o ● o	supportive
complicated	o o o o o ● o	easy
inefficient	o o o o o o ●	efficient
confusing	o o o o o o ●	clear
boring	o o ● o o o o	exciting
not interesting	o o ● o o o o	interesting
conventional	o o ● o o o o	inventive
usual	o o o ● o o o	leading edge

Clickup scored highly in being supportive, easy to use, clear and efficient. It is a very user friendly website and is simplified down to the basic use of the website leaving little room for confusion or misuse, this changes when used by a coordinator as it can overwhelm them with different options.

Clickup scored low in being, exciting, interesting, and inventive. It is neither a new cutting edge implementation nor a bland seen before layout. Clickup mainly falls into a middling rating as it aims to fulfil the needs of all rather than appealing to a single demographic.

Peak-End Rule Analysis

The peak of Clickup is the added to-do list that is prominent down the side of the webpage. It is an incredibly useful feature that also creates a lasting memory of usability in the user.

Clickup does not necessarily have an end state but rather the completion of a task that is ticked off. There is little satisfaction from the website itself and rather satisfaction in the completion of a task.

Strengths and Weaknesses

Strengths:

- Easy to use and understand
- Clear flow and intended use
- Completes required actions easily and quickly
- Simplistic in a way that doesn't leave too much to be desired.

Weaknesses:

- Overly simplistic at times
- Hidden features
- No satisfaction from task completion

Design Guidelines

Make completion status visibly and impactful. Provide immediate feedback. Make use of interaction feedback to reinforce task completion. Make milestones memorable. Avoid excessive stylisation in detriment to usability. Use visual emphasis strategically.

Conclusion

Clickup is a simple but reliable website that accomplishes the task it has set out to achieve. While there is minimal stylisation there are still elements in originality and interest that help to draw the user back. Clickup makes good use of user customization to allow users to change the layout and other aspects in different ways for whatever they desire. The customizability could be made good use of in our design.
